Client Information

Client Name: Full Court Analytics

Full Court Analytics aims to bring the power of a panel of analysts to the player. Offering a wide variety of analytic chart and graphs, a player never again has to wonder where their 3's need work; with Full Court, they can know where, when, and against whom they tend to brick.

Mentor Feedbacks

Our mentor advised us to use a different method of storing local information rather than the current method we were using. It actually helped clear up a couple other bugs we were experiencing.

Other feedback consisted of practices we were doing well, like using default values and value types, and also things we should avoid doing, like having multiple mutable objects within a single accessor class.

Client Feedback

- Client thought we got far and looks really good for the first iteration
- On the annotation page you select the buttons 2pt miss, 2pt make, 3pt miss, 3pt make a shot chart should come up to select where on the court the shot was taken from

Iteration 2 Features

- To get the annotator page full working with the play log.
- To get the profile page done with it connecting with the account settings page.
- Get the shot chart, action types and shot types pages done.
